Description

Set up in 2005 with the aim of promoting a ?fair? and contemporary architecture, the firm has made a name for itself thanks to its know-how, rigour and efficiency in projects of varying magnitude, rolled out in very different fields : collective housing, private homes, the service and corporate sectors, hotels and industry.

As a member of the ?building with energy? campaign, a member of the passive home platform and an adviser on the energy performance of new buildings, we undertake to take an ecologically responsible approach to each of our projects.

The team is comprised of highly-qualified architects and technicians sharing the same high standards of quality. Each employee brings their own specific bag of skills and expertise, gained from diverse backgrounds and experiences, and that help give a tangible added value to the plethora of projects developed within the firm.

Before getting started on any project, the firm undertakes to methodologically analyse each aspect of the client?s brief in order to produce an architecture that reflects their aesthetic, technical and financial expectations.

The spacious offices, situated on avenue Huart Hamoir 1, building 2, 1030 Brussels, are equipped with high-performance, cutting-edge IT equipment that meet our stringent quality demands.
