

Architects

MSA

Description

MSA is a design, engineering and project management office for architecture, physical planning of public spaces and urban development.

Within the framework of urban development studies, it carries out work upstream of the conventional practices of architecture. The aim of that work is to change established practices in favour of new visions and methodologies for projects.

From the same perspective, MSA also carries out architectural projects, development projects for public spaces and civil engineering works.

MSA is interested in projects of all scales: from the bus shelter erected at Porte de Flandre in Brussels to the urban development project for the Josaphat site (35 hectares) and including the architectural execution of intermediate-scale operations (Navez housing project and Divercity project).
