ROTOR

Description

Rotor is a cooperative design practice that investigates the organisation of the material environment. We develop critical positions through research and design. Besides projects in architecture and interior design, we also produce exhibitions, books, economic models and policy proposals. Rotor was founded in 2005. Today, a core of about a dozen long-term collaborators sets the agenda of the group. The concrete realisation of our projects is tributary to a more extended network of ad hoc collaborators. In 2016, the spin-off Rotor Deconstruction was founded as a separate entity. Its mission is to facilitate the reuse of building components.

Creation

2005

Associates
