SUBWAYARCHITECTURE LABO-M SRL

Rue Saintraint 10
5000 Namur

Description

Very concerned about environmental issues, ATELIER SUBWAY ARCHITECTURE applies its principles of eco-construction to various fields of activity: single-family homes, medical facilities, industrial and radiopharmaceutical buildings, commercial and sports surfaces, social housing, interior architecture, furniture, and objects. While our design naturally aligns with eco-construction, it also aims to be minimalist and pure in its design. We adapt this approach to each project and its specific context, leading each of our missions to a unique and personalized result. By necessity, we have completed many extensions and transformations. We are able to adapt to any existing architecture ? it's an interesting constraint ? but we are not attached to any particular type. Our main drive is the desire to make connections. Hence the name "Subway" that we have chosen to evoke this, which also illustrates our website. Like a subway that connects places and people, we connect materials, construction techniques, ideas, and expressions that create meaning. Our inspiration stems from these connections. Recently, our expertise has been exported to Thailand where we have the opportunity to apply our experience to projects without any limits.
