

Project

MIDI SUEDE

Architects

URBAN PLATFORM

Address

Rue de Suède 6, 1060 Bruxelles

Programe

Housing block accomodating 30 apartments built to the Passive House Standards

About

The project aims to ensure the visual continuity of the constructions and a fluid transition with regard to the type and size of the neighbouring buildings. A dual perception emerges, depending on the direction the viewer is looking in, which corresponds to the two scales articulated by the project: the modern city of the 1960s and the historic city of the nineteenth century.

Starting out from a straight line in the row of façades, the project proposes to create loggia-like excrescences according to an apparently random framework, loggias which are the contemporary embodiment of the principle of the classical bow-window as can be found in the streets of the municipality. The loggias, treated alternatively as solids and voids, enable lateral views from the building all the while managing the level of privacy between the dwellings and enabling the best intake of daylight in this urban context.

Typology

Housing (include mixed use)

Status

Built

Conception

2007

Delivery

2011

Client

Société d'Economie Mixte (SEM) - SDRB/BPI

Area

3800
