ICI ARCHITECTES

Description

The office ici architects dedicates its energy to realize projects that go beyond scales, programs and disciplines. Its vision of a simple and pure (elegant) architecture is based on a particular attention to the context, increased by their double formation of architecture and urbanism, and a meticulous care for every detail. The office's work centres essentially on the development and the optimization of existing buildings. The aim is to offer the users an appropriate solution to meet their specific needs. With a rational and pragmatic approach, beauty blossoms from the perfect web of the program, from the integration of new techniques, from the use of the materials and from their relation with the project as a whole. More than the aesthetic of space that's life that takes place there that matters. The architect's job is to provide the best living environment. Founded in 2010 by Olivier Goffin, Aurélie Maes, Loïc Hermant and Jeremy Plateau, ici architects office is the realization of many years of collaboration and friendship.
