BAUKUNST: BAP!2 VERSAILLES

In keeping with the theme of this year's Biennial of Architecture and Landscape of Versailles, the installation proposed by Baukunst will orchestrate links between several disciplines, at the crossroads of art and science. The project will combine textile design, sound programming and solar capture in order to reveal through sound the solar energy and light intensity present in its surroundings.

Like a new allegory, the installation will reinterpret in a performative way the symbolic codes of the architectural environment of Versailles by using energy to make the invisible visible.
